PROFESSIONAL PROFILE

Software Developer with 2+ years of experience in Java and Python. Worked as a full-stack developer on an Operations Management System, handling both frontend and, primarily, backend development. Focused on developing new features from design through implementation, as well as resolving bugs reported by testers through debugging and maintenance activities.

TECHNICAL SKILLS

Core Backend: Python (FastAPI), Java (Spring Boot).
Architecture & Security: Microservices, Kafka, RESTful APIs, JWT, OAuth2, Distributed Systems.
Integrations: Stripe (Payments), Firebase (Push/Auth), Google & Apple API.
Databases: SQL (MySQL, Oracle, DB2, Postgres), NoSQL (MongoDB, Neo4j).
Cloud & DevOps: AWS, Kubernetes, Docker, CI/CD.
Modern Workflow: Git, Maven, Agile (Scrum/Kanban).
Frontend: Angular.

PROFESSIONAL EXPERIENCE

Software Engineer

R.j.c. Soft, Pisa, Italy | Mar 2023 – Oct 2025

Backend Development

- Designed and developed a payments messaging application from scratch using Python (FastAPI).
- Implemented secure JWT-based authentication and integrated OAuth2 (Google/Apple) to streamline user onboarding.
- Integrated Stripe for payment processing and Firebase for real-time push notifications.
- Contributed to the design of the microservices architecture and database schema, with a focus on scalability.

Mission-Critical Systems

- Managed priority tasks and resolved bugs via Jira, supporting the stability of software for national infrastructure.
- Maintained and optimized Spring Batch processes with Quartz Jobs for automated data processing.
- Performed analysis and reporting on DB2 databases for providers and stakeholders, ensuring accuracy in monthly billing and counts.
- Used Kafka to manage real-time data streams and asynchronous communication between microservices, ensuring system resilience.

Operations Management System

- Developed and maintained full-stack management applications, building RESTful endpoints.
- Enhanced frontend functionality with Angular, integrating OpenLayers for geospatial data visualization.
- Collaborated in an Agile environment, following code best practices.

PERSONAL PROJECTS

GameHub ([BE](#) - [FE](#))

Social platform for video games with polyglot persistence: game catalog, reviews, wishlist, and a user-following system for personalized recommendations.

Stack: Java 17, Spring Boot 3.2, Angular 22, Neo4j, MongoDB.

EDUCATION

Bachelor's Degree in Computer Engineering

University of Pisa, Italy | Pisa, PI | 2023

Thesis: Development, on an open-source autopilot platform, of a drone-swarm dispersal mechanism based on repulsive pheromone.

LANGUAGES

Italian, English, Spanish
